**APPLICATIONS:** 

General housekeeping

## **SUCTION UNIT**

Suction is generated by one carbon brush by-pass motor activated by independent switches located on a solid metal head that protects the motor from possible blows and ingress of external bodies, keeping the noise level to a minimum.

## **FILTERING UNIT**

The polyester bag filter, placed inside the filter chamber, guarantees a large filtering surface area and high resistance to dust passage and clogging.

## **COLLECTION UNIT**

The vacuumed material is collected in a stainless steel container, mounted on wheels, which allows for quick and clean disposal.
